MLFQ - Scheduling Questions

- Due Sep 25 at 11:59pm
- Points 22
- Questions 11
- Available until Sep 25 at 11:59pm
- Time Limit None

Instructions

For this set of questions you will make use of the python programs `scheduler.py` and `mlfq.py` provided by the book's authors at their github site.

1. **Link for scheduler.py (https://github.com/remzi-arpacidusseau/ostep-homework/tree/master/cpu-sched)**
2. **Link for mlfq.py (https://github.com/remzi-arpacidusseau/ostep-homework/tree/master/cpu-sched-mlfq)**

Download the python program and use python to run the code. I recommend that you take the time to setup Linux in WSL if you are on a windows system and complete these exercises in Linux. You will be required to use Linux for the related programming exercise.

It's important to answer each question in complete sentences and not just write simple numerical or short phrase answers. I'm not going to belabor this point other than to say that sloppy work here can impact your grade.
